Children increasingly are coming into contact with illegal drugs. According to the American Academy of Child and Adolescent Psychiatry, the average age of first time marijuana use is 14. The average age of first time alcohol use is 11 for boys and 13 for girls. By the time they graduate from high school 40% of all teens have used marijuana. We cannot assume that all children who smoke marijuana will become heroin addicts. However, the danger does exist, and research supports the progression of use.
